An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

The title of the invention has been changed to: "Antenna-coupled microbolometer including detection of a change in electrical resistivity of a locally doped region".

In the specification:

On page 2, lines 11 and 14, "Figure 1" has been changed to "The Figure", respectively.

In the drawing: The label of "FIG. 1" has been changed to "THE FIGURE" (See attachment).

The following is an examiner's statement of reasons for allowance: The prior art fails to teach an antenna-coupled microbolometer multilayer structure and its method, among other features, comprising: a dielectric layer with one locally doped region for providing a thermal conductive path from a first side to a second side thereof; an antenna on the first side coupled to the doped region; a read-out integrated circuit on the second side coupled to the doped region; a conductive substrate between the dielectric layer and the circuit; and an electrical connection connecting the doped region and the circuit so that the circuit detects a change in electrical resistivity of the doped region due to thermal energy absorbed from the antenna.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably

accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

I) Shoulders 5,123,039 discloses an energy conversion system having a plurality of traveling wave devices.
